

Kristepher Reed

Full-Stack Developer · Game Systems Engineer · AI Automation Builder

Florence, SD · Remote · (605) 838-1341 · krisreed2001@gmail.com · github.com/Tkiljoy · dragonheartstudios.net

PROFILE

Self-taught full-stack developer and game systems engineer with 6+ years of professional experience and a decade of independent development. Built, shipped, and monetised commercial software products from scratch — no team, no bootcamp, no degree. Generates \$30,000+ in annual revenue through a self-founded digital products studio serving 1,000+ paying customers across live multiplayer platforms. Equally at home architecting server infrastructure, designing databases, building responsive front-ends, and integrating cutting-edge AI tooling. Currently building production AI automation workflows and a multi-agent AI orchestration platform. Everything learned by doing.

TECHNICAL SKILLS

Languages: Lua (10 yrs) · Java (10 yrs) · C# (9 yrs) · JavaScript / TypeScript · Python · SQL · HTML / CSS

Front-End: React · Responsive UI Architecture · UI/UX Design · Figma

Back-End / Infra: Node.js · FastAPI · Electron · MySQL · REST APIs · Client-Server Architecture

AI / Automation: Claude & OpenAI API · LLM Agent Pipelines · Multi-Agent Orchestration · n8n Workflow Automation · MCP (Model Context Protocol)

Game Engines: Unity (5 yrs) · Unreal Engine · Roblox Studio (Luau, Rojo workflow)

Tools: Git / GitHub · VS Code · Trello · Obsidian · Remote-first collaboration

EXPERIENCE

Founder & Lead Developer2022 – Present

Dragon Heart Studios · Remote · dragonheartstudios.net

- Founded a self-funded digital products studio from zero — no external investment, no co-developers — and grew it to \$30,000+ in annual revenue with 1,000+ paying customers.
- Designed, built, and shipped complete commercial products end-to-end: Prison Simulation, Petty Crime System, and more — covering server logic, database persistence, real-time client-server sync, and polished responsive UI.
- Manages a studio community of 2,000+ members across multiple product brands, including market positioning, tiered pricing, and e-commerce marketplace compliance.
- Currently building DHS-Lair: a multi-agent AI orchestration platform — a router agent that delegates to role-based specialist agents, with shared SQLite memory, an append-only audit log, kill switches, and an exfil guard. Node.js / TypeScript / Fastify, built on Claude. Voice I/O on the roadmap.

Co-Founder & AI Automation Developer2026 – Present

ReeMain · Remote

- Co-founded an AI automation studio delivering end-to-end automation solutions to SMB clients across 60+ service categories — from smart inbox management and lead qualification to invoice automation and agent pipelines.
- Shipped 27 production automation workflows on an n8n-based stack, integrating LLM reasoning, Claude and OpenAI APIs, and MCP tooling.
- Designed the modular platform architecture underpinning the studio's long-term transition from services to a self-serve SaaS model.

Lead Developer2023 – Present

District 77 · Remote

- Lead technical development for a live online multiplayer community platform with 1,000+ members — owning server architecture, gameplay systems, and continuous feature delivery.
- Designed and built the community's combined forum and store platform from scratch: full React front-end with custom HTML, CSS, and JavaScript — no templates, no WordPress.

Freelance Developer2020 – Present

Self-Employed · Remote

- Delivered 50+ commissioned custom scripts, mods, and gameplay systems for gaming content creators with audiences of 5,000,000+ subscribers — building to client specification, independently managed from brief to delivery.
- Built a returning client base through consistent quality and reliable turnaround, with multiple creators commissioning repeat and ongoing work.

SELECTED PROJECTS

Prison Simulation System2025

Live Commercial Product · Dragon Heart Studios · Lua, JavaScript, SQL, HTML/CSS

- Complete gameplay loop with progression, persistence, and economy systems — designed, built, and shipped solo. Sold to server operators and actively running in production on live multiplayer platforms.

Petty Crime System2025

Live Commercial Product · Dragon Heart Studios · Lua, JavaScript, SQL

- Modular criminal-activity gameplay system with server-side validation and real-time client sync. Part of the DHS commercial catalogue generating \$30,000+ annually.

DHS-Lair2026

Multi-Agent AI Orchestration Platform · In Development · Node.js, TypeScript, Fastify, SQLite, Claude

- Self-hosted platform that coordinates a crew of role-based AI agents (router, dev, review, ideas, ops), each sandboxed with its own tool allowlist. Features shared persistent memory (SQLite + FTS), an append-only audit log, kill switches, and an outbound exfil guard. Built entirely self-directed. Voice I/O on the roadmap. github.com/Tkiljoy/DHS-Lair

District 77 Community Platform2023

Full Build · React, HTML, CSS, JavaScript

- Designed and built a combined forum and e-commerce store for a 1,000+ member multiplayer community — built from scratch, no CMS, no templates.

EDUCATION

High School Diploma2019

Madison Central High School · Madison, SD

Self-Taught Developer

Everything in this resume was learned independently — no bootcamp, no university programme, no formal training. A decade of building real products for real users, iterating under real commercial pressure, and shipping software that people pay for.

AVAILABILITY

Available immediately for remote roles. Open to full-time, contract, or freelance engagements. Flexible across time zones.
